NEW: POST INDUSTRIAL RECYCLED POLYPROPYLENE

STUA takes a new step in sustainability. By adding its own polypropylene waste in the manufacture of its products. This results in a higher recycling rate, less use of raw materials and a drastic reduction of waste.

NUEVO: POLIPROPILENO RECICLADO POSTINDUSTRIAL

STUA da un nuevo paso en sostenibilidad. Incorporando sus propios residuos de polipropileno en la fabricación de sus productos. El resultado es una mayor tasa de reciclaje, un menor uso de materias primas y una drástica reducción de residuos.

RESPONSIBLE MANUFACTURING

Our products are totally manufactured in the European Union.

The STUA designs are created for a long duration. This helps to make a friendly use of the natural resources.

We offer a 2-year guarantee on all the STUA products.

STUA guarantees a period of availability of spare parts of 10 years for any product.

The wood used to manufacture our designs comes from sustainably managed forests registered with the PEFC (Programme for the Endorsement of Forest Certification).

The MDF material and glues used in the production are formaldehyde free. STUA products use materials that comply with M1 and the California Air Resources Board ACTM 93120.2.

Most STUA fabrics comply with the strict international environmental standard ISO 14001 for their products and manufacturing processes.

STUA's upholstery is fire-resistant but avoids the use of harmful retardants like PBB and PBDE.

The foams used by STUA complies the most exhaustive ecological textile certificate: the OEKO-TEX Standard 100.

The analyses include prohibited and regulated substances, chemicals considered dangerous to health, and preventive parameters.

STUA's chrome plating process uses a trivalent chromium bath to replace the highly-toxic hexavalent chromium bath. The trivalent chromium process must produce hard chrome components that perform as well as or better than the older process.

Other additional advantages involved in this process:

- It is not necessary to reduce hexavalent chromium in wastewater.
- It makes it easier to handle and use the product.
- No gas emissions are produced.

The treatment of metal parts for their subsequent painting, with powder paint or chromed, is the one corresponding to a degreasing and phosphating of the same. No aromatic solvents are used and no diffuse emissions of volatile organic compounds are generated.

The recyclability of the metallic materials used by STUA is 97%.

Our plastic elements are excluded from heavy metals and phthalats in their manufacture, as well as halogenated plastics such as PVC.

STUA promotes processes with low water consumption. In the last 5 years, we have achieved a 31% saving in drinking water consumption by implementing saving processes.

ENVIRONMENTALLY FRIENDLY PACKAGING

In the pursuit of an environmentally friendly packing, STUA is removing all the plastic from this process.

All STUA cardboard packaging is made with recycled materials and is 100% recyclable because no staples are used in the production.

Our remaining plastics packaging contain no halogen.

Logistics MINIMIZING carbon footprint. STUA choose the eco-friendliest transportation method available.

We select logistic partners who use environmentally-friendly technologies for their vehicles/engines and are located close to the factory where our products are manufactured in order to reduce the emission release.

Load Optimization. We try to send a truck only when it is fully loaded.

Route Optimization. By choosing the best route, it is possible to save fuel and, consequently, reduce the amount of CO₂ emissions.
